

# Coursera IBM Data Science Certification Capstone Project

SIDDHANT SHARMA

# Contents

- **Introduction Section:**
  1. Discussion of the "background situation" leading to the problem at hand:
  2. Problem to be resolved
  3. Audience for this project.
- **Data Section:**
  1. Data of Current Situation (current residence place)
  2. Data required to resolve the problem
  3. Data sources and data manipulation
- **Methodology Section:**
  1. Process steps and strategy to resolve the problem
  2. Data Science Methods, machine learning, mapping tools and exploratory data analysis.
- **Results Section**

Discussion of the results and how they help to take a decision.
- **Discussion Section**

Elaboration and discussion on any observations and/or recommendations for improvement.
- **Conclusion Section**

Decision taken and Report Conclusion.

# Introduction Section

## 1.1 Scenario and Background

I have picked Gurgaon, Haryana in India as the current location for this Project  
Within walking distance to many amenities and venues in the area, such as various international cuisine restaurants, cafes, gyms, food shops and entertainment.

## 1.2 Problem to be resolved:

The challenge to resolve is being able to find an apartment unit in Manhattan NY that offers similar characteristics and benefits to my current situation. Therefore, in order to set a basis for comparison, I want to place subject to the following conditions:

- Top amenities in the selected neighborhood shall be similar to current residence (See item 2.1)
- Desirable to have venues such as coffee shops, restaurants, wine stores, gym and food shops
- As a reference, I have included a map of venues near current residence in Gurgaon Haryana.

## 1.3 Interested Audience

I believe this is a relevant project for a person or entity considering moving to a major city in Europe, US or Asia, since the approach and methodologies used here are applicable in all cases. The use of FourSquare data and mapping techniques combined with data analysis will help resolve the key questions arisen. Lastly, this project is a good practical case toward the development of Data Science skills.

# Data Section

## 2.1 Data Requirements

- Geodata for current residence in Gurgaon with venues established using Foursquare.
- List of Manhattan (MH) neighborhoods with clustered venues established via Foursquare (as in Course Lab).

[https://en.wikipedia.org/wiki/List\\_of\\_Manhattan\\_neighborhoods#Midtown\\_neighborhoods](https://en.wikipedia.org/wiki/List_of_Manhattan_neighborhoods#Midtown_neighborhoods)

- List of subway metro stations in Manhattan with addresses and geo data (lat,long): [https://en.wikipedia.org/wiki/List\\_of\\_New\\_York\\_City\\_Subway\\_stations\\_in\\_Manhattan](https://en.wikipedia.org/wiki/List_of_New_York_City_Subway_stations_in_Manhattan)) , (<https://www.google.com/maps/search/manhattan+subway+metro+stations/@40.7837297,-74.1033043,11z/data=!3m1!4b1>)
- List of apartments for rent in Manhattan area with information on neighborhood location, address, number of beds, area size, monthly rent price and complemented with geo data via Nominatim.

[http:// www.rentmanhattan.com/index.cfm?page=search&state=results](http://www.rentmanhattan.com/index.cfm?page=search&state=results)

## 2.2 Data Sources, Data Processing and Tools used

- Gurgaon data and map is to be created with use of Nominatim , Foursquare and Folium mapping
- Manhattan neighborhoods were obtained from Wikipedia and organized by Neighborhoods with geodata via Nominatim for mapping with Folium.
- List of Subway stations was obtained via Wikipedia, NY Transit web site and Google map,
- List of apartments for rent was consolidated from web-scraping real estate sites for MH. The geolocation (lat,long) data was found with algorithm coding and using Nominatim.

# Methodology

## **The Strategy to find the answer:**

The strategy is based on mapping the described data in section 2.0, in order to facilitate the choice of at least two candidate places for rent. The information will be consolidated in ONE MAP where one can see the details of the apartment, the cluster of venues in the neighborhood and the relative location from a subway station and from work place. A measurement tool icon will also be provided. The popups on the map items will display rent price, location and cluster of venues applicable.

## **The Tools:**

Web-scraping of sites is used to consolidate data-frame information which was saved as csv files for convenience and to simplify the report. Geodata was obtained by coding a program to use Nominatim to get latitude and longitude of subway stations and also for each of (144 units) the apartments for rent listed.

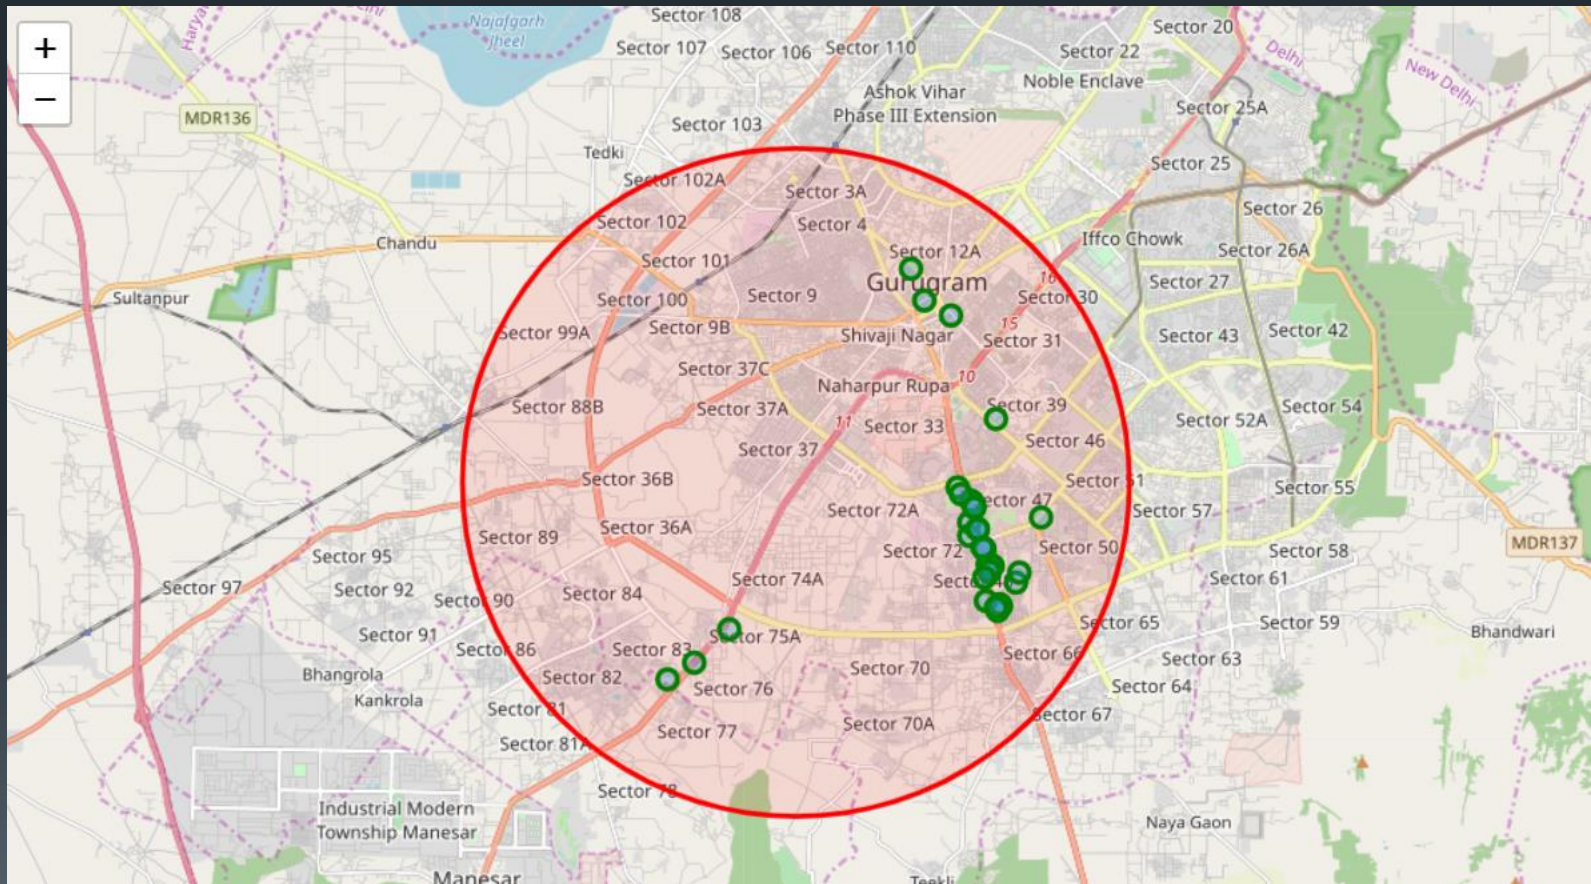

Geopy\_distance and Nominatim were used to establish relative distances. Seaborn graphic was used for general statistics on rental data.

Maps with popups labels allow quick identification of location, price and feature, thus making the selection very easy

# Execution and Results

# Current Residence Neighborhood - Gurgaon

# Apartment Selection

I was able to explore all possibilities since the popups provide the information needed for a good decision.

Apartment 1 rent cost is US6900. It is located approximately 600 meters from subway station at Prince Street. I can walk to work place and use subway for other places around. Venues for this apt are as of Cluster 1 and it is located in a Soho Neighborhood of Manhattan.

Apartment 2 rent cost is US6935, just under the US7000 budget. Apt 2 is located 60 meters from subway station at Fulton Street, but I will have to ride the subway daily to work possibly 40-60 min ride. Venues for this apt are as of Cluster 1.

Based on current location venues, venues in cluster 1 resemble the places in my current location. I would pick APARTMENT 1 as it is more in the middle of the town and hence provides more convenience.

# Discussion

- ☐ In general, I am positively impressed with the overall organization, content and lab works presented during the Coursera IBM Certification Course
- ☐ I feel this Capstone project presented me a great opportunity to practice and apply the Data Science tools and methodologies learned.
- ☐ I have created a good project that I can present as an example to show my potential.
- ☐ I feel I have acquired a good starting point to become a professional Data Scientist and I will continue exploring to creating examples of practical cases

# Conclusions

- ❑ I feel rewarded with the efforts, time and money spent. I believe this course with all the topics covered is well worthy of appreciation.
- ❑ This project has shown me a practical application to resolve a real situation that has impacting personal and financial impact using Data Science tools.
- ❑ The mapping with Folium is a very powerful technique to consolidate information and make the analysis and decision thoroughly and with confidence. I would recommend for use in similar situations.
- ❑ One must keep abreast of new tools for Data Science that continue to appear for application in several business fields.
